The new 12-TWH1 All stainless steel tankless water heater expansion vessel. Designed for use with tankless water heaters or P.O.U. water heaters having 2 gallons or less volume.

This new device absorbs thermal expansion and pressure surge in tankless and point-of-use water heaters to protect the heat exchanger. The 12-TWH1 can also be used as a shock suppressor (water hammer arrestor) for appliances with a fixture unit capacity of 11 ("A" size). This unit is durable and corrosion resistant and has no moving parts to wear out.

Easy to install, the 12-TWH1 features a pressurized air filled ball encased in stainless steel. The unit requires no pre charge adjustment or maintenance.

The unit is tested and approved by IAPMO, and tested at the IAPMO lab to the NSF 61 standard for potable water.
